

EDEN[®] 104 106

The miniaturised motor features high performance, low consumption and is very quiet. These pumps are particularly suitable for filtration and water circulation in aquaria and tabletop fountains; to create rivers and cascades in hobbies, plastic models, Christmas Cribs and for moving water in industrial applications.

Different versions are available to best satisfy the needs of the different markets:

- With pre-filter grid, especially for aquarium use.
- With low-intake system to work even with few millimetres of water inside table fountains etc.
- With incorporated halogen lamp and low voltage feed, to give light and movement in small indoor fountains and water effects.
